

TempTale®4

USB Interface Plus Reader

The USB Interface Plus Reader provides the communications link between a TempTale®4 monitor and a standard USB port. It is used for downloading time-and-temperature data recorded by the monitor to your PC for viewing, analysis and archiving.

The USB Interface Plus Reader includes a software CD containing a USB driver that allows it to work on Windows®-based PCs. Once the USB driver is installed, the USB driver creates a virtual COM port on the PC, ready for connection to the USB Interface Plus Reader.
