START

T83001710 Rev. D • 24 Sep 2020

Starting a ThermoAlert™ Indicator

- Push the **START** button on the front of the device and hold it for approximately 3 seconds.
- The display will respond with a " ✔ " and flashing " ♥ " icon once per second. *(Figure 1)*.
- Remove the back sticker label and affix the indicator to an instruction card or directly to a clean, dry surface on the product or package.
- After the start delay period has expired, the ThermoAlert will begin monitoring time-temperature alarm conditions.

Figure 1

Reading a ThermoAlert Indicator

- Once the package has arrived at its destination, remove the ThermoAlert indicator and immediately examine the indicator display screen.
- If the display presents a " ✔ ", no alarms have been activated during the trip *(Figure 1)*.
- If the display presents an " ✘ ", an alarm has been activated.
  - If the display presents " HI ", the high temperature alarm (>) has been activated. *(Figure 2)*.
  - If the display presents " LO ", the low temperature alarm (<) has been activated. *(Figure 3)*.
- If both HI and LO alarms are activated or the indicator operation life has expired, the display will present " ⋮ " on the right side of the display. *(Figure 4)*.
